

VALT · OWN THE MUSIC YOU LOVE

Milestone 2 — Development Report

Web3 Artist Portal on Cardano

Project: Valt — Superfan Experience Engine | **Project Catalyst:** Fund 11, Project #1100019

Milestone: 2 — Development | **Live portal:** <https://www.valt.digital> | **Network:** Cardano pre-production testnet

Prepared: 25 June 2026

1. Milestone Overview

Milestone 2 (Development) delivers a working Web3 artist portal with on-chain NFT functionality on the Cardano pre-production testnet. Where Milestone 1 established the design and integration plan, Milestone 2 implements it: a deployed, wallet-connected platform where fans connect a Cardano wallet, collect songs as NFT editions, and unlock token-gated artist content. The platform is **live and publicly accessible** at <https://www.valt.digital>, running on the Cardano pre-production testnet (`preprod`) as is appropriate for a development milestone. Mainnet launch is a later milestone, following security review and QA.

2. Platform Pivot — AfroCharts → Standalone Valt

The Milestone 2 **Outputs** referenced integrating NFT-gating into *Afrocharts.com*. During development the **AfroCharts partner API became non-functional** — `api.afrocharts.com/v1/songs` returns HTTP 200 but a fatal server-side database error ("Couldn't fetch APIUsersMySQL"), making a dependent integration impossible. We therefore built a **standalone, self-owned Web3 portal — Valt (valt.digital)** — that delivers every graded Acceptance Criterion and Evidence item independently of any third-party platform.

This pivot is consistent with the milestone's graded terms: the **Acceptance Criteria and Evidence are platform-agnostic** (none reference Afrocharts.com). The AfroCharts integration script is retained in the repository as documentation of the attempted integration.

3. Acceptance Criteria → Evidence

#	Acceptance criterion	Status	Where
1	Have 5–10 artists' partner songs chosen and ready for launch	Met	\$7 + Launch Partner Roster (companion doc): 2 artists live with 12 songs on-chain-capable + a curated roster of confirmed & selected partners
2	Testnet "web3 portal" accessible	Met	Live at https://www.valt.digital (\$4); screenshots E5, E9
3	Users connect a Cardano wallet and mint a song NFT	Met	CIP-30 connect + Mint/Collect via NMKR; on-chain mints in \$6; screenshots E2, E4
4	Users access a restricted artist page only if they hold the artist's song NFT	Met	"The Valt" token-gating (\$5); screenshot E6

Evidence of completion	Status
Screenshots of the functional backend of the web3 portal	Checklist E1–E9 (§8) — captured from the live site
On-chain proof of NFTs on testnet	8 NFTs verified on-chain, policy <code>b5a88ac...</code> (§6) — Cardanoscan links
GitHub repo updated with code	github.com/Awen-online/valt (§9)

4. Web3 Portal Backend

The portal is built on WordPress as the application layer, with a custom plugin (`valt-platform`) providing all Web3 and superfan functionality and a custom theme (`valt-theme`) providing the front-end. Cardano integration is handled through CardanoPress (CIP-30 wallet connection), NMKR (minting + IPFS), and Blockfrost (chain queries).

```
Fan browser (CIP-30 wallet: Eternl, Nami, Lace, Flint, ...)
  | Wallet Connect
  v
valt.digital (WordPress)
- valt-theme (Hello Elementor child + Alpine.js)
- valt-platform plugin v2.0.0: discovery / mint+collect / The Valt (gating) / follow / NFT Monitor
- CardanoPress 1.33 - Pods (Artists, Songs)
  |               |
  v               v
NMKR (preprod)   Blockfrost (preprod)
minting + IPFS pinning  chain / ownership queries
```

Layer	Technology
Application	WordPress
Web3 / superfan logic	<code>valt-platform</code> plugin v2.0.0 (22+ PHP modules)
Front-end	<code>valt-theme</code> (Hello Elementor child), Elementor Pro, Alpine.js
Wallet / CIP-30	CardanoPress (testnet-only enforced during this phase)
Minting / NFT mgmt / IPFS	NMKR (pre-production)
Chain queries	Blockfrost (pre-production)
Content modeling	Pods (Artists, Songs custom post types)
Hosting	DreamHost — https://www.valt.digital

Live surfaces

Home (artist-first discovery + song grid), Discover (filterable artist directory, REST-driven), Artist page + **The Valt** (token-gated vault), Song page (full CIP music metadata + Mint/Collect + Cardanoscan link), Collection ("My Valt"), Fan Dashboard, FAQ, Contact, and an admin **NFT Monitor** (NMKR sync, bulk upload, mint event log). **Published content:** 2 artists (Cullah — 7 songs; Mie — 5 songs), 12 songs total, each with album art and full CIP-25 music metadata.

REST API (`/wp-json/valt/v1/`)

GET `/discover/artists` , `/discover/genres` , `/discover/trending` , GET `/nft/status/{song_id}` (wallet ownership). Custom tables: `valt_follows` , `valt_nft_registry` (per-song asset name + policy id).

5. User Flow & Token Gating

Holding an artist's song NFT unlocks that artist's **Valt** — an animated vault that reveals the holder's owned editions and gated content. Non-holders are prompted to collect. Wallet connection is **restricted to testnet wallets** during this phase (a mainnet wallet is automatically disconnected) so the experience stays coherent with the preprod NFTs.

6. TestNet NFT Proof (on-chain)

Field	Value
Network	Cardano pre-production testnet
NMKR project UID	2b486bb9-fa80-4229-833d-3442f5f75820
Policy ID	bf5a88ac0a236c22c2772a51ff2fa33301e17c42aa8f95fcd585b86a
Metadata standard	CIP-25 (music metadata v3)
Token naming	valt + song slug + edition (e.g. valtcullah-falling0002)

Minting is verified on-chain via Blockfrost (preprod). **8 NFTs are minted under the policy**, across both launch artists:

Asset name (on-chain)	Song	Artist
valtcullah_falling , ...falling0002 / 0004 / 0007	Falling (4 editions)	Cullah
valtValtSetantasCreed001	Setanta's Creed	Cullah
valtValtDanseLIntervention259	Danse L'Intervention	Cullah
valtValtDeadEnd261	Dead End	Mie
valtmassochist263	Masochist	Mie

Verify on Cardanoscan (preprod):

- Policy: preprod.cardanoscan.io/tokenPolicy/bf5a88ac...
- Token (Falling #0002): preprod.cardanoscan.io/token/...76616c74...

IPFS pinning is handled by NMKR on upload (the cover art is sent to NMKR, which pins it and returns the IPFS hash), so each token carries standards-compliant CIP-25 media metadata.

How songs are minted — on the fly

Valt mints **on demand** — there is **no pre-minted inventory**. A song NFT is created and minted only when a fan collects it (or an artist lists it for sale): each action registers a fresh NFT in the NMKR project via `UploadNft` and then mints it, so nothing is drawn from a pre-staged pool. Two paths, both beginning with `UploadNft` :

```
Collect (promo / mint-and-send)
fan taps Collect --> UploadNft (NMKR) --> MintAndSendSpecific/{project}/{nft}/1/{wallet}
--> poll GetNftDetailsById until "minted" --> NFT delivered to the fan's wallet
```

```
List for sale (payment gateway)
  artist lists song --> UploadNft + priceInLovelace --> NMKR pay page (pay.preprod.nmkr.io)
    --> buyer pays test ADA --> NMKR mints + delivers automatically
```

Both paths build **CIP-25** music metadata (authors, album, genre, duration, audio reference) before upload; the on-chain asset name is the project slug `valt` + the song's generated name. A WordPress cron worker runs the mint asynchronously and writes the resulting transaction hash and asset id back onto the song. Because every collect creates its own upload, the project's unsold "uploaded" entries are **disposable artifacts**, not required stock — only the **minted** editions exist on-chain (the 8 above).

7. Launch Partners

Partner songs are **chosen and ready for launch**. Two artists are **live with on-chain editions** as end-to-end proof, and a curated roster of confirmed and selected partners stands ready to onboard at public launch (see the companion **Launch Partner Roster**).

Artist	Status	Songs
Cullah	Live (on-chain)	7 songs published; Falling, Setanta's Creed, Danse L'Intervention minted
Mie	Live (on-chain)	5 songs published; Dead End, Masochist minted
Father Sky (Anthony Duetsch)	Confirmed	Selected for launch (sync.land)
+ 8 vetted target partners	Selected — onboarding at launch	Curated independent artists across Africa & diaspora; see Launch Partner Roster

8. Evidence & Screenshots

ID	Screenshot	Where
E1	NMKR preprod dashboard — project <code>2b486bb9...</code> , mint counts	NMKR
E2	Song page Mint/Collect flow with wallet connected	/song/{slug}/
E3	Minted token on preprod.cardanoscan.io (policy <code>bf5a88ac...</code>)	Cardanoscan
E4	Home — artist-first grid live	/
E5	Discover — artist directory	/discover/
E6	The Valt — token-gated content unlocked for a holder	/artist/{slug}/
E7	Collection — wallet's owned editions	/collection/
E8	NFT Monitor admin — NMKR sync + event log	wp-admin
E9	Browser at the live public URL https://www.valt.digital	—
