

Valt · M4 Launch & Rollout · Bug and resolution log

Scope: defects found on the live public site (<https://www.valt.digital>, Cardano preprod testnet) during the launch and rollout phase, **2026-08-07 to 2026-09-30**. Complements the M3 Test & Bug-Fix Report ([docs/M3_Implementation/M3_Test_and_Bugfix_Report.pdf](#) , six pre-launch defects), which covers the build phase. **Milestone criterion served:** M4 #4, "Detailed documentation of all bugs found with each resolution."

How issues were found: live-site monitoring (access/error logs, analytics sessions), a full UX audit of the public site ([UX_Audit_2026-09-27.md](#)), and end-to-end checks during the London / Hazy Jo release. **Every resolution is in the private repo** ([Awen-online/valt-private](#) , commit or deploy record given) and was verified on production after deploy. Deploy backups for the 2026-09-27/28 changes are kept on the server.

Severity: **High** = blocks a core flow or breaks access control · **Medium** = wrong output / misleading · **Low** = cosmetic or polish.

Resolved

#	Found	Severity	Defect	Root cause	Resolution	Commit
R-01	2026-09-27	High	Holder-only content on one artist unlocked for holders of any artist.	All artists share one NFT policy; [valt_gated_content] checked only "holds this policy".	Gate now requires the visitor's editions to belong to that artist (per-artist asset filter). Verified: page HTML served to non-holders contains no gated content.	9469962
R-02	2026-09-27	High	Six songs (Warp Spasm, Nowhere (I Call Home), The Gift of Emer, Ice, Freakshow, Beauty) could show "Not available to collect" despite having free editions.	Inventory read only page 1 (50 items) of NMKR GetNfts ; the project has 100+ free editions.	Paginate through every page. All songs now report correct stock (6 to 20 free each).	01ad685
R-03	2026-09-27	High	10 of 11 songs (11 songs at the time; London added later) had no playable audio; listeners couldn't hear a song before collecting.	song_url / audio_file never populated on most songs; Falling's URL pointed at a retired storage endpoint (objects-us-east-1).	Attached licensed audio to the Cullah catalogue and London; replaced Falling's dead URL; new sticky player + play buttons on every card and row.	21df314 , 9469962
R-04	2026-09-27	Medium	Site rendered on a white page with a system font and hot-pink buttons, instead of the Valt brand.	The parent theme's reset.css loaded after Valt's stylesheet and won; the Ruda font @import sat after :root , which browsers ignore.	Enqueue Valt CSS after the parent theme's handles (priority 20 + dependencies); load Ruda as a proper stylesheet with preconnect.	21df314
R-05	2026-09-27	Medium	Primary buttons (Collect, Connect, Apply) failed contrast	Cream text on gold-dark background.	Dark ink on a gold gradient: 10.3:1 (WCAG AAA). Muted text raised	21df314

#	Found	Severity	Defect	Root cause	Resolution	Commit
			at 2.2:1 (a code comment claimed 6:1).		from 4.4:1 to 5.2:1 on cards.	
R-06	2026-09-27	Medium	The feedback survey popped up on a new visitor's 3rd click (about a minute in).	"Visit count" incremented on every page load, not per visit.	Count once per browser session.	21df314
R-07	2026-09-27	Medium	Testnet song pages showed a dollar price (e.g. "\$4.94 USD") next to a disclaimer that purchases aren't real.	USD estimate rendered regardless of network.	On testnet, show "test ADA" instead of a USD estimate.	21df314
R-08	2026-09-27	Medium	The locked Valt said "Connect your wallet to enter", implying connecting is enough; there was no path to collecting.	Copy predated the holder model.	"Collect any {artist} song to unlock this Valt" + "Choose a song" and "Already collected? Connect" buttons.	21df314
R-09	2026-09-27	Medium	The FAQ page rendered without the site header, footer or player, showed a stale "© 2025" footer, and listed discontinued wallets and unverified claims.	Page used the parent theme's default template; content from June.	Moved to the Valt template; rewritten (current wallets, testnet honesty, listen-first, creator scope).	deployed 2026-09-27 (content), 21df314
R-10	2026-09-27	Low	"0 followers", "0 fans" and "0 / 50 collected" shown across the site (empty social proof).	Counts rendered at zero.	Hide counts until non-zero; show "Edition of N" before the first collect.	21df314
R-11	2026-09-27	Low	For Artists benefit cards were white with a near-invisible heading on the dark site.	Styles written for the old light surfaces.	Dark-surface card styles; copy widened to all creators.	deployed 2026-09-27
R-12	2026-09-27	Low	Assets re-downloaded on every page view.	Theme CSS/JS versioned with <code>time()</code> .	Version by file modification time.	21df314
R-13	2026-09-27	Low	A single-release artist's song page showed an empty "More from ... No releases yet" section.	Section rendered unconditionally.	Render only when the artist has other releases.	9469962
R-14	2026-09-27	Low	Holder video stayed at 480p even on fast connections (found in pre-deploy testing).	The <code><video></code> element kept its intrinsic size, so the adaptive player capped quality to it.	Video fills its frame; verified 360p / 480p / 720p / 1080p selection by bandwidth and screen.	5721967
R-15	2026-09-28	Medium	Fans had no way to learn that testnet collecting needs a Preprod wallet and test ADA; a likely cause of zero organic collects.	Missing onboarding.	New "How to collect" guide (wallet, Preprod switch, faucet, collect, open the Valt), linked from every Collect box on testnet and from the FAQ.	bad73f9
R-16	2026-09-05	High (security)	NMKR API key and Pinata JWT could only live in the database	Secrets read from options only.	<code>wp-config.php</code> constants are now	6279c5e

#	Found	Severity	Defect	Root cause	Resolution	Commit
			options table (present in any DB dump).		authoritative over DB options.	
R-17	2026-09-06	Medium (security)	<code>wp-login.php</code> had no brute-force throttling (host has no WAF).	Not configured.	Login throttle mu-plugin: 5 failures / 15 min per IP, auto-expiring logout.	<code>c225343</code>
R-18	2026-08-08	Medium	A mobile visitor typed <code>/forartist</code> then <code>/forartists</code> , hit two 404s and never reached the artist application.	Launch copy prints the URL as plain text; the hyphen gets dropped when retyped.	Conservative 301 redirects for unambiguous near-miss slugs.	<code>914ccb6</code>
R-19	2026-08-07	Low	Links shared to SMS/social previewed an outdated 2024 logo.	<code>og:image</code> fell back to an old upload; the homepage's featured image overrode the default.	Branded 1200×630 share card; homepage forced to use it.	<code>894a437</code> , <code>b4d00e5</code>
R-20	2026-08-07	Low	"Request an invite" button on For Artists rendered raspberry pink.	Parent theme's <code>[type="submit"]</code> reset tied on specificity and won on load order.	Qualified selector (<code>button.valt-intake__submit</code>); assets versioned by file time.	<code>5765182</code>
R-21	2026-09-29	Medium	The new Collect quantity picker's "+" button did nothing for returning visitors until a hard refresh.	Plugin JS/CSS were versioned with the fixed plugin version (<code>2.0.3</code>) under a 30-day browser cache, so updated scripts never reached cached browsers.	Version plugin assets by file modification time (same fix as R-12 for the theme).	<code>0259bcc</code>
R-22	2026-09-29	Medium	Multi-edition checkouts (2+ editions in one NMKR Pay order) crashed on NMKR's side (500 / "404 page").	Undocumented NMKR requirement: the project price list needs an entry for each quantity sold; ours had only 1 and 3.	Price-list entries for 1 to 5 editions; verified 2- and 3-edition checkouts load on preprod and mainnet.	<code>4bf73ca</code>
R-23	2026-09-29	Medium	NFT metadata prepared for upload carried no usable artwork (London editions had image "ipfs://PLACEHOLDER"; older songs had no image field) and titles contained HTML entities (e.g. '). Found before any London edition was minted.	The upload routine built metadata before the image was pinned and hard-coded image/png.	Use the real image CID and mime type, correct the first edition once NMKR returns its IPFS hash, decode entities for on-chain text. Already-uploaded, unminted editions to be corrected via NMKR's metadata update before minting.	<code>b3bd6d3</code>
R-24	2026-09-30	High	With the minting partner's testnet stalled (O-04), no one could collect: payments were accepted but nothing minted.	Single dependency on NMKR's hosted checkout.	New in-page checkout via the Anvil API: the server builds one transaction that takes the payment and mints the editions straight to the buyer, the buyer's wallet signs, the server verifies the transaction (exact editions, destination, price) before co-	<code>49b27ef</code>

#	Found	Severity	Defect	Root cause	Resolution	Commit
					signing with the project's own policy key, then submits. Per-song switch between NMKR and Anvil; edition ledger with 15-minute holds; separate asset series so the two can't collide. Freakshow and London switched on.	
R-25	2026-09-30	Medium	First live collect on the new checkout returned "Collecting is paused".	The web server (PHP-FPM) runs without <code>\$HOME</code> , so the policy key path resolved empty; command-line checks passed because the CLI has it.	Absolute key path in server config, plus a fallback to the account's home directory.	6eacaa5
R-26	2026-09-30	Medium	After signing, the page showed "Collected" and "Open the Valt" before the transaction had confirmed, and the button could be pressed again mid-flow. A fan following the link too early saw "You don't hold a song yet".	The UI treated "submitted" as "done".	Button and edition picker lock for the whole flow; a pending panel (signed, sent, confirming, in your wallet) polls a new on-chain status endpoint and only then offers the Valt; the artist page explains connect/sync when arriving straight from a collect.	6e256f0
R-27	2026-09-30	Low	Editions minted through the new checkout were all named just "Freakshow", so collectors couldn't tell them apart.	Song title used as the token name.	Per-edition names ("London #3"); confirmed the marketplace index parses the edition number. The two earlier Freakshow editions keep the old name.	de39594
R-28	2026-09-30	Low	Fee guidance understated the cost of multi-edition orders; a 3-edition test order was refused for insufficient funds.	The checkout service's fee is 0.15 + 1 ADA per edition (observed on-chain), not a flat amount.	Button note, insufficient-funds message and How to collect guide corrected.	6496fb0
R-29	2026-09-30	Low	A fully claimed song showed a grey "Not available to collect" badge, reading like an error.	No distinct sold-out state.	Sold-out panel on the song page, "Sold out" chip on cards and spotlight, "Listen to" instead of "Collect".	3c4bc3b
R-30	2026-09-30	High	Found by the multi-wallet test: London a10 was minted to a test wallet, but the site's edition ledger showed it as a temporary hold, so after 15 minutes it could have been offered, and minted, a second time.	A failed build (insufficient funds) released its holds by writing back a copy of the ledger cached earlier in the same request, overwriting a parallel checkout's "sent" entry.	The ledger is always read fresh from the database; builds also skip any edition number already on-chain (second line of defence); a reconcile command re-marks on-chain editions. No duplicate was minted.	eab5521

#	Found	Severity	Defect	Root cause	Resolution	Commit
R-31	2026-09-30	Medium	(audit X-01) Every page carried two sets of Open Graph / Twitter tags and two meta descriptions; one set still used a 2024 logo and an outdated description.	The SEO plugin and the parent theme each printed their own tags alongside Valt's.	One source: Valt's branded tags; the plugin's social output and the parent theme's description turned off; homepage description updated.	9137b74
R-32	2026-09-30	Medium	(audit X-02) The footer "Terms" link opened an outdated 2024 terms page.	Two terms pages; the footer pointed at the old one.	<code>/terms/</code> now serves the current Terms & Conditions; the 2024 page is archived; the old URL redirects (301).	9137b74
R-33	2026-09-30	Medium	(audit X-03) Leftover demo pages (split, payment, delegation, leaderboard, campaigns) were public and listed in the sitemap.	Scaffolding pages from early development never unpublished.	Set to draft (reversible) and the sitemap regenerated.	9137b74
R-34	2026-09-30	Low	(audit X-06) Media-library scripts and styles loaded on every public page.	The plugin enqueued the WordPress media picker globally for the artist dashboard's upload buttons.	Loaded only when the artist dashboard renders.	9137b74
R-35	2026-09-30	Medium	Found on a phone collect (VESPR, Android): after the transaction confirmed, the Collect button stayed on screen reading "Sending..." and locked, so the finished checkout looked stuck.	The button's <code>display</code> rule overrode the <code>hidden</code> attribute used to remove it.	Hidden parts of the checkout are forced hidden; after confirmation the panel offers "Open the Valt" and a deliberate "Collect more" (fresh page, fresh stock). Collecting on Android through VESPR's in-app browser confirmed working (London #15).	b236323
R-36	2026-09-29	Medium	Wallet-connected visitors pressing Collect got "Please refresh the page and try again" instead of a checkout.	WordPress REST nonces are bound to the logged-in user; the collect request left out the WordPress nonce, so it ran as a logged-out user and the user-bound nonce check failed for everyone connected.	A user-independent collect token (HMAC of a 12-hour window with a server secret), checked by the collect endpoints.	0e6feb1

Observed, no code change needed

#	Date	Observation	Finding
O-01	2026-09-21	8 × HTTP 500 on <code>/for-artists/</code> and <code>/feedback/</code> within one second.	All from Facebook's link-preview crawler (<code>facebookexternalhit</code>) fetching in parallel after the "one month on" post; no PHP error logged; pages returned 200 immediately after. Monitored; no recurrence from real visitors.
O-02	2026-09-22	5 × HTTP 500 on song pages.	One identical Chrome 133 / macOS signature from five countries with no referrer (a scraper on rotating proxies); no PHP error logged. Not user-facing.
O-03	2026-09-27	Plan to host the London master WAV in the audio bucket.	Bucket policy makes every object public, which would have exposed the master. The WAV was removed within minutes (verified 404); only the

#	Date	Observation	Finding
			streaming MP3 is public. Holder video is instead served from outside the web root through the per-artist gate (<code>4297faf</code>).
O-04	2026-09-29	Minting partner (NMKR) testnet outage: from about 06:30 UTC, NMKR's preprod checkout first failed to load, then accepted payments that were never processed (orders confirmed on-chain inside their reservation windows, funds left unswept, NFTs left reserved; a direct mint-and-send stalled too). Mainnet checkout was unaffected.	Not a Valt defect. Documented with transaction evidence and reported to NMKR support. Mitigations built the same day: a multi-edition checkout fix for NMKR's undocumented price-list requirement (R-22), and a verified self-hosted minting fallback (policy-key import, metadata builder, name checks, dry-run by default) so the platform is not dependent on a single provider. Update 2026-09-30: NMKR's backend recovered at about 07:29 UTC and processed all seven paid orders in seven transactions within a minute (19 London <code>e</code> -series editions delivered to the paying Awen test wallet; a separate direct mint-and-send of <code>e20</code> followed at 07:37:36 UTC to the same wallet). By then collecting had already moved to the Anvil checkout (R-24). All but one of the NMKR-minted editions carry NMKR's upload-time placeholder image (see R-23); they are Awen test tokens and will be burned or have their metadata refreshed.

Checkout test: multi-wallet collect (disclosed test, 2026-09-30)

To check the new checkout under parallel load, five **Awen-created test wallets**, funded by Awen, collected London through the live site using the same REST calls as the Collect button (build, wallet signature, submit, on-chain confirmation). These are test transactions, not collectors or sales.

Script: `code/valt-mint/bin/collect-test.js`.

Wallet	Run	Editions	Result	Confirmed in
2	alone	2 (a06, a07)	tx <code>cdb10463...9d26</code>	76 s
3, 4, 5	at the same moment	3 / 1 / 2	wallet 5: a08, a09 (<code>ef7205be...b2e1</code>); wallet 4: a10 (<code>8d4c60ed...adb1</code>); wallet 3 refused (insufficient funds, see R-28), holds released immediately	50 s / 102 s
1	alone	1 (a11)	tx <code>071da8ef...deee</code>	89 s
3	retry after top-up	3 (a12 to a14)	tx <code>8c853e00...d334</code>	67 s

Findings: no edition was allocated twice and no numbers were skipped under parallel builds; a refused build released its editions at once; every accepted order confirmed in 50 to 102 seconds; the fee model was corrected (R-28).

Open / scheduled (from the 2026-09-27 audit)

#	Severity	Issue	Plan
X-04	Medium	Additional HTTP hardening for the public site.	Scheduled before mainnet (tracked privately).
X-05	Low	Reduce information exposed by default WordPress endpoints.	Scheduled before mainnet (tracked privately).
X-07	Medium	Ordinary mobile browsers need a wallet extension; wallet in-app browsers work (VESPR on Android confirmed, R-35).	Wallet-connect for ordinary mobile browsers; roadmap.
X-08	Low	Songwriter / producer / © credits missing for London (page + NFT metadata).	Requested from the artist.
